

FIRST ANNUAL CONFERENCE

OCTOBER 28-30, 1982

SHERATON WASHINGTON

WASHINGTON, D.C.

SYSTEMS TECHNIQUES: ECONOMIC REALITY IN THE 80s

Emphasis will be on the design of systems to improve performance and prevent problems rather than just broad system description. Lessons learned from experience and their application for the future are sought. Papers which summarize the literature or describe the state-of-the-art are also in keeping with the theme and are actively solicited. Cost/benefit data is encouraged where appropriate.

Deadlines

- May 15, 1982 Send a two page abstract and supporting material.
June 15, 1982 Notification of acceptance.
August 1, 1982 Submission of final paper.

Exhibit information is available from the AAMSI office.

Areas of interest include:

- Health education, simulation and training
Patient identification and record linkage
Error rate consequence and control
Importance of input and output data format
Medical coding techniques and file structure for search and retrieval
Decision making techniques and their role in diagnosis, design and planning
Financial charge and payor reimbursement and their relationship to medical data
Principles of user access and restriction of access from medical data
Implementation principles, systems and people
Performance and quality assessment techniques
Assessment of current technology
Costs underlying systems functions

Conference Chairman: Frederick R. Jelovsek, M.D., Duke University Medical Center.

The AAMSI Conference immediately precedes the 6th Annual Symposium on Computer Applications in Medical Care, Oct 30-Nov 2, at the Sheraton Washington Hotel.
