Hannover

As reported earlier activity is focussed on development of standards for quantitative electrocardiography in the frame of the European project Common Standards For Quantitative Electrocardiography. (Leader of this project is Prof. J.L. Willems, Leuven.)

After establishment of the CSE Learning and Test Measurement Library and after extensive investigation of program performance with added noise, now investigation of diagnostic performance of ECG programs and development of a diagnostic reference library is under work.

From June 2-5, 1985 in Leuven/Belgium the 4th working conference in the series of IFIP/IMIA ECG working conferences took place. (Prof. J.L. Willems will separately report on this conference.)

At this time the European project takes full attention of people involved in ECG processing. If there are other geographical groups considering problems of standardization information exchange is to be considered.
